WINTER GARDEN SYSTEMS

W HAKKIMIZDA

İnsan hayatına konfor katacak, çevreye duyarlı, modern yaşam alanları oluşturmak için hayat bulan Eliz Cam Sistemleri başarılarla dolu yolculuğuna 2008 yılında başlamıştır. **Hayata kalıcı ve güvenli izler** bırakmayı kendine vizyon olarak belirleyen Eliz Cam Sistemleri; sektöre birçok yeniliği getiren ürünlerin de mimarı olmuştur.

Kuruluşundan bu yana artan ivmesi, insan odaklı kurum felsefesi ve geldiği noktadaki konumu itibarıyla yarınlarına güçlü adımlarla yürüyen Eliz Cam Sistemleri, bu ülkenin gururla anılacak, küresel oyuncusu olma hedefine her geçen gün biraz daha yaklaşmaktadır.

W ABOUT US

The successful journey of Elize Window Systems started in 2008 to create environmentally conscious, modern living spaces that will add comfort to human life. Elize Window Systems aims the vision to leave **permanent and reliable marks in life** has been the architect of the sector with different products introducing innovation.

Increasing acceleration of the firm, human-centric corporate philosophy and current position since the first day of the establishment have enabled Elize Window Systems to take strong steps forward to the future and gets the firm one step closer to the target to be the global player.

Wingartech 101-Wingarterm 311 Sistemi Özellikleri

Wingartech 101-Wingarterm 311 Systems' Properties

Kış bahçesi sistemi, dikey ve yatay taşıyıcılar üzerine yerleştirilen camlar ile oluşmaktadır. Sistemde profil tipine göre 4+4 lamine cam veya 4+4 lamine+16hb+6mm temperli ısıcam kullanılmaktadır. Sistemde yağmur ve yoğuşma sonucu oluşabilecek su, sistemin oluşuna ve dikmelerine entegre edilmiş drenaj kanallarından dışarı tahliye edilir. Camlar yatay eğim doğrultusunda alüminyum taşıyıcılar ile birbirine monte edilir. Ayrıca cam taşıyıcı profillerinin her iki tarafında epdm fitil kullanılması sayesinde yalıtım özelliği arttırılmıştır. Cam taşıyıcı profillerin iki uç kısmında açılan kertmeler ile duvar bağlantı profili ve oluk profiline sabitlenir. Oluk özel tasarımı ile hem yalıtım hem de taşıyıcı görevi üstlenmektedir. Kullanılan alüminyum aksamlar eloksallı kaplama veya elektrostatik boyalıdır. Alüminyum et kalınlığı sistem içerisinde farklılık göstermekle birlikte yük taşıyıcı yerlerinde 5 mm'ye kadar çıkmaktadır. Sistem farklı çatı tiplerine göre uygun yapılabildiği gibi sağlıklı çalışabildiği maksimum derinlik 3000 mm olarak planlanmıştır. Ayrıca ek çelik takviye sayesinde 3500 mm'ye kadar kolayca uygulanabilir. Sistem bünyesinde görünür kısımlardaki vida ve profil kертme detaylarını gizlemek amacıyla vida gizleme ve iç kapak profilleri kullanılmaktadır.

- Yenilikçi Tasarım
- Farklı Açı Alternatifleri
- Kolay Montaj Ve Kolay Cam Uygulamaları
- Çelik Takviyesi Ve Güçlü Yapısı ile Sağlam Bağlantılar

The winter garden system is placed with windows placed on vertical and horizontal carriers. 4 + 4 laminated glass according to some profile type or for 4 + 4 laminated + 16as + 6mm tempered double glazing. Water that may occur as a result of rain and condensation of the system is evacuated from the drainage channels integrated in its gutter and slopes. Aluminum at the horizontal slope of the windows are mounted with carriers. In addition, the glass carrier profiles are on both sides of the epdm wick, thanks to its insulation feature increased. It is fixed to the wall connection profile and gutter profile by the crowns opened in the two end lists of the glass carrier profiles. Groove special with its design both as insulation and carrier. Aluminum components used anodized coating or electrostatic It is painted. Although it differs in the aluminum thickness section in the system, it goes up to 5 mm in the load carrier locations. Maximum depth is planned as 3000 mm but it is available up to 3500 mm with the help of the additional steel reinforcement. Screw and profile notching in visible parts within the system For screw hiding and inner covers to hide details.

- Innovative Design
- Different angle alternatives
- Easy assembly and easy glass applications
- Sturdy connections with steel reinforcement and strong structure

WINGAR SERİSİ / SERIES

- Kış bahçesi sistemleri projelendirilmeden önce uygulamanın yapılacağı duvar ve taban yüzeylerindeki ince işçilik (alçı,sıva,beton,seramik,...) işlemlerinin tamamlanmış olması gerekmektedir.
- Projelendirme aşamasındaki en önemli husus imalat ölçüsünün sağlıklı alınmasıdır.
- İmalat ölçüsü alınırken kullanacağımız ekipmanlar başlıca şunlardır;

Lazer distomat terazi (lazer şakül terazi,lazer hizalama), kırılmaya dayanıklı profesyonel kullanıma uygun metre, lazer metre, markalamaya uygun kalem.

1. Sistem Açılımı: Sistemin dıştan dışa ölçüsü alınmalıdır (A-A Kesiti). Eğer zemin eğimli ise eğimin olduğu yön ve derecesi belirlenmelidir.
2. Sistem Genişliği: Sistemin dıştan dışa ölçüsü alınmalıdır. Su tahliyeleri bu aşamada belirlenmelidir.(B-B Kesiti)
3. Sistem Ön Yüksekliği: Yağmur oluğunun alt kısmından zemine kadar olan yükseklik ölçülmelidir (A-A Kesiti). Bu aşamada belirlenen ölçü sistemin eğimini belirlemektir.
4. Sistem Arka Yüksekliği: Duvar bağlantı profilinin üst noktasından zemine kadar olan yükseklik ölçülmelidir (A-A Kesiti).
5. Eğim 10° - En:3500 - Açılım:3000
Çelik takviyesiz kar yükü 75kg/m²
6. Eğim 10° - En:3500 - Açılım:3500
Çelik takviyeli kar yükü 75 kg/m²'dir

NOT: BU HESAPLAMA YUKARIDA BELİRTİLEN ÖLÇÜLERE GÖRE YAPILMIŞTIR. KIŞ BAHÇESİ SİSTEMLERİ İÇİN PROJEYE GÖRE HESAP YAPILMASI GEREKİR. STANDARTLAŞTIRMA YAPILAMAZ. BÖLGEYE GÖRE BELİRLenen KAR YÜKLERİ BU HESAPLAMAYA EKLENEBİLİR.

- Fine workmanship (plaster, plaster, concrete, ceramic, ...) on the walls and floor surfaces where the application will be carried out before the winter garden systems are designed. Transactions must be completed.
- The most important point in the project design phase is to take the production size in a healthy way.
- The equipment we will use while taking the manufacturing dimension are as follows;

Laser distomatic scales (laser plummet scales, laser alignment), break-resistant professional use meter, laser meter, marking pen.

1. System Depth: The system should be measured from outside to outside (Section A-A). If the ground is inclined, the direction and grade of the slope should be determined.
2. System Width: Measurement of the system from outside to outside should be taken. Water drains should be determined at this stage.(B-B Section)
3. System Front Height: The height from the bottom of the rain gutter to the ground should be measured (Section A-A). The slope of the measurement system determined at this stage to determine.
4. System Back Height: The height from the top of the wall connection profile to the floor should be measured (Section A-A).
5. Slope:10° - Width:3500 - Opening:3000
Snow load without steel reinforcement 75kg / m²
6. Slope:10° - Width:3500 - Opening:3500
Snow load without steel reinforcement 75kg / m²

NOTE: THIS CALCULATION IS MADE ACCORDING TO THE MEASUREMENTS ABOVE. FOR WINTER GARDEN SYSTEMS BY PROJECT ACCOUNT MUST BE DONE. IT CAN NOT BE USED AS STANDARD. SNOW LOADS DETERMINED BY REGION CAN BE ADDED TO THIS CALCULATION.
